DETAILED ACTION

The following action is in response to the amendment filed for application 10/711,203 on September 19, 2006.

Allowable Subject Matter

Claims 1-20 are allowed.

The following is an examiner's statement of reasons for allowance: the prior art of record fails to show or render obvious the method for inhibiting stalling of an engine of a hybrid electric vehicle as claimed, and particularly including implementing a stall mitigation strategy for a predetermined period of time if the engine is running and a gear ratio is selected, wherein the stall mitigation strategy includes providing supplemental torque to the engine with the electric machine to keep an engine speed above a first threshold speed value, and including the remaining controls of claim 1. The present invention also particularly includes keeping the engine speed above a first threshold speed value if the engine is running and a gear ratio of the power transfer unit is selected; terminating the stall mitigation strategy if a predetermined period of time has elapsed, and including the remaining controls of claim 11. The present invention also particularly includes discontinuing the stall mitigation strategy if the engine speed is greater than a second threshold speed value, a predetermined period of time has elapsed, or if the accelerator pedal is actuated, and including the remaining controls of claim 19.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
